YOUR 1-PAGE SLEEP RESET

The Shifting Clock

Your sleep isn't short. It's out of sync.

Your bedtime and wake-up time keep moving, so your body never quite knows when night starts. Sleeping in on weekends feels great, but it works like a small jet lag every Monday. Your body loves rhythm. Give it one fixed point and the rest follows.

SOUND LIKE YOU?

Tick what you recognise

- [ ] Your sleep times change by an hour or more during the week
- [ ] You sleep in on weekends, and Monday feels like jet lag
- [ ] You're wide awake on Sunday night
- [ ] Your energy dips at random times of the day
- [ ] If you track: your bed and wake-up times look all over the place

2 or more ticks? Then the tips below are made for you.

WHAT'S GOING ON

Your inner clock keeps getting reset, so sleepiness doesn't show up when you need it.

FEELS LIKE

Lying awake when you want to sleep, and tired when you need to be awake.

THE GOOD NEWS

A steady morning anchor resets your clock, often within a week or two.

Your tips to sleep better

Start tonight. Pick one or two, not all five at once.

1 **One fixed wake-up time**
Same time all 7 days, weekend included, give or take 30 minutes.

2 **Daylight in the morning**
Get outside within an hour of waking. Even 5 to 10 minutes counts.

3 **Go to bed when sleepy**
Start your wind-down at the same time, but go to bed when you feel sleepy, not just because the clock says so.

4 **Dim evenings, bright mornings**
Soft, warm light in the evening. As much light as possible in the morning.

5 **Weekend rule**
Sleep in for 30 minutes at most. Tired? A short nap in the early afternoon works better.

WHAT TO NOTICE

How quickly you fall asleep, and how you feel in the morning.

Feel first, check second: rate how you feel before you look at any app.

Your 7-night check-in

Judge by the trend over a week, never by one night.

NIGHT	1	2	3	4	5	6	7
My tips done? ✓							
Morning energy 1–5 before you open any app							
Hours slept							
Resting heart rate optional, if you track							

No wearable? No problem. How you feel in the morning is the most honest measurement there is. If you do track and your feeling and your score disagree, trust the feeling.

BONUS: DID IT WORK?

Ask your AI *after night 7.*

> Here are my 7 nights: [paste your check-in or a screenshot of your app's weekly view, without your name]. My sleep type is The Shifting Clock and I tried [your tips]. Compare nights 1–3 with nights 5–7. Did my morning energy, sleep or resting heart rate change? Explain it simply, and don't diagnose anything.

Works with ChatGPT, Claude, Gemini or your wearable's own AI assistant.

PLEASE DON'T SKIP THIS

Talk to a doctor if...

- you snore loudly, gasp, or someone has noticed breathing pauses
- you've slept badly at least 3 nights a week for 3 months or more
- you're exhausted no matter what you change, or feel low most days
- your sleep changed with perimenopause and it's affecting your life
