YOUR 1-PAGE SLEEP RESET

# The Steady Sleeper

## Your basics are solid. Now let's fine-tune.

Your answers don't show one big sleep blocker. If you still wake up tired, the reason may be less obvious: stress during the day, your cycle or hormones, or simply needing more sleep than you get. Your next step: listen to your body, before any app.

SOUND LIKE YOU?

### Tick what you recognise

- [ ] You sleep okay, but don't feel truly rested
- [ ] Your energy changes with stress or your cycle
- [ ] Daytime stress stays in your body until the evening
- [ ] You check your sleep score before checking in with yourself
- [ ] Your sleep has changed over the last years

**2 or more ticks?** Then the tips below are made for you.

WHAT'S GOING ON

Your nights are fine, but your days may not give your nervous system enough moments to come down.

FEELS LIKE

Okay, but not great. Tired in the afternoon. Good nights and bad nights without a clear reason.

THE GOOD NEWS

Small adjustments and a bit of self-observation usually reveal your pattern.

## Your tips to sleep better

Start tonight. Pick one or two, not all five at once.

**1 Feel-first check**

Every morning, rate your energy from 1 to 5 before you look at any app or score.

**2 30 more minutes**

For one week, give yourself 30 minutes more in bed. Maybe you simply need more sleep.

**3 Calm moments by day**

5 to 10 minutes a day for your nervous system: yoga, breathing, a phone-free walk or sound healing.

**4 Notice your cycle**

If you have a cycle, note where you are in it. Hormones can change how you sleep.

**5 Protect your last hour**

Keep the last hour before bed calm and screen-light, with a routine that feels good to you.

WHAT TO NOTICE

**Which evenings come before your best mornings.**

Feel first, check second: rate how you feel before you look at any app.

## Your 7-night check-in

Judge by the trend over a week, never by one night.

| NIGHT | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
|---|---|---|---|---|---|---|---|
| My tips done? ✓ | | | | | | | |
| Morning energy 1–5<br>before you open any app | | | | | | | |
| Hours slept | | | | | | | |
| Resting heart rate<br>optional, if you track | | | | | | | |

**No wearable? No problem.** How you feel in the morning is the most honest measurement there is. If you do track and your feeling and your score disagree, trust the feeling.

BONUS: DID IT WORK?

### Ask your AI *after night 7.*

> Here are my 7 nights: [paste your check-in or a screenshot of your app's weekly view, without your name]. My sleep type is The Steady Sleeper and I tried [your tips]. Compare nights 1–3 with nights 5–7. Did my morning energy, sleep or resting heart rate change? Explain it simply, and don't diagnose anything.

Works with ChatGPT, Claude, Gemini or your wearable's own AI assistant.

PLEASE DON'T SKIP THIS

### Talk to a doctor if...

- you snore loudly, gasp, or someone has noticed breathing pauses
- you've slept badly at least 3 nights a week for 3 months or more
- you're exhausted no matter what you change, or feel low most days
- your sleep changed with perimenopause and it's affecting your life
