YOUR 1-PAGE SLEEP RESET

The Wired Mind

Your body is tired. Your mind didn't get the memo.

You go to bed exhausted, but your nervous system is still on duty. It replays the day, plans tomorrow and sometimes wakes you at 3 a.m. to do it all again. For you, better sleep starts before your head hits the pillow.

SOUND LIKE YOU?

Tick what you recognise

- [ ] You feel tired but wired at night
- [ ] Your to-do list starts the second you lie down
- [ ] You wake up between 2 and 4 a.m. and your mind starts working
- [ ] Small noises keep you awake
- [ ] If you track: your resting heart rate runs higher, or your HRV lower, at night

2 or more ticks? Then the tips below are made for you.

WHAT'S GOING ON

Stress hormones are still up at bedtime. Your body wants to rest, but your nervous system keeps scanning for things to solve.

FEELS LIKE

Racing thoughts, replaying conversations, lying awake for ages, light sleep.

THE GOOD NEWS

A calm, repeated evening routine teaches your nervous system that it's safe to switch off.

Your tips to sleep better

Start tonight. Pick one or two, not all five at once.

1 Screen-free last 2 hours

No work and no work laptop in the last two hours before bed. Phone out of the bedroom.

2 Brain dump on paper

Write tomorrow's to-do list and whatever is on your mind. Once it's on paper, your brain can let it go.

3 10 minutes of slow breathing

In for 4, out for 6. Longer exhales tell your body it can relax.

4 Something calm for your brain

A book, gentle yoga, sound healing, or a calm series on a small screen in night mode. Nothing exciting.

5 Same routine, same order

Do your wind-down in the same order every night. Repetition is what makes it work.

WHAT TO NOTICE

How long it takes you to fall asleep, and how you feel in the morning.

Feel first, check second: rate how you feel before you look at any app.

Your 7-night check-in

Judge by the trend over a week, never by one night.

NIGHT	1	2	3	4	5	6	7
My tips done? ✓							
Morning energy 1–5 before you open any app							
Hours slept							
Resting heart rate optional, if you track							

No wearable? No problem. How you feel in the morning is the most honest measurement there is. If you do track and your feeling and your score disagree, trust the feeling.

BONUS: DID IT WORK?

Ask your AI *after night 7.*

> Here are my 7 nights: [paste your check-in or a screenshot of your app's weekly view, without your name]. My sleep type is The Wired Mind and I tried [your tips]. Compare nights 1–3 with nights 5–7. Did my morning energy, sleep or resting heart rate change? Explain it simply, and don't diagnose anything.

Works with ChatGPT, Claude, Gemini or your wearable's own AI assistant.

PLEASE DON'T SKIP THIS

Talk to a doctor if...

- you snore loudly, gasp, or someone has noticed breathing pauses
- you've slept badly at least 3 nights a week for 3 months or more
- you're exhausted no matter what you change, or feel low most days
- your sleep changed with perimenopause and it's affecting your life
